

Germán Lugo

Full stack developer · Node.js · TypeScript · Laravel · MongoDB

01 EXPERIENCE

Foodchain SpA · Full stack developer [PENDING]

I3P, Politecnico di Torino incubator

Agri-food traceability startup with its own blockchain (Quadrans). Three concrete contributions:

- 01 **Miner monitoring proxy.** Service that logged each mining node's connection time and computed a reward proportional to that uptime.
- 02 **Automated crypto payouts.** Pipeline that automatically sent tokens to every newly registered user according to the onboarding policy; from a manual process to zero intervention.
- 03 **Traceability viewer.** Web app that read each batch's on-chain data and rendered it as the product's visual journey, from producer to consumer. Full frontend, chain reads, and review of the smart contracts involved.

Stack: Node.js · JavaScript · Web3.js · Solidity · React

02 PROJECTS

Pagine Azzurre Client work [pagineazzurre.net](#)

Exchange marketplace for the Italian community with the VAL complementary currency: offer, find and donate products, services and skills while spending fewer euros.

Architect and developer of the whole project for the client. · React · Node.js · MongoDB · Vercel

▲ ~600 active users in production

FlowPack Client work

Multi-tenant logistics SaaS (deliveries and pickups) for carriers and agencies. AI-assisted incident classification, multichannel notifications (WhatsApp, email, webhooks), bulk CSV import, carrier integrations, per-tenant isolation with security audit.

Sole developer and architect; product, backend, frontend, CI/CD with staging and production. · Node.js · TypeScript · MongoDB

▲ Production pilot with real logistics-sector clients

Chocósfera Own project [chocosfera.com](#)

Ethical cocoa traceability on blockchain: a Telegram bot lets the grower photograph the tree, capture geolocation and issue a tokenized digital certificate; the same channel connects producer and buyer.

Founder and developer. · Next.js · Prisma · Solidity · Web3.js · Telegram Bot API · MailerSend · Three.js

▲ Real field data from cocoa growers in Venezuela · precursor ChocoCoin (Bitcoin fork, 2013–14)

// About

since:
Self-taught, building in Web3 since 2013.
school:
École 42 Firenze.
roles:
Solopreneur: CEO, architect and developer at once. I know what every technical decision costs in euros and in hours of sleep.
languages:
Spanish, Italian, English. None of them with a Google Translate accent.
method:
Async and documented by habit, not by mandate.
off the clock:
Chess lover and ex-marathoner in rehab.
supervisor:
Choco, the dog. Reviews every deploy from under the desk.
